

# Sustainability Reporting and Carbon Management

## Holistic support for sustainability reporting

More businesses than ever are disclosing ESG metrics and setting sustainability targets. However, as businesses become increasingly transparent, investors are demanding even more, pushing companies to go beyond performance reporting toward strategic planning, governance, and risk management. As these expectations evolve, businesses will need to prepare themselves to:

- Strengthen emissions data
- Engage stakeholders
- Assess climate-related risks and opportunities
- Set science-based targets

Robust data is the essential foundation to a strong disclosure strategy. Leveraging technology, industry insight, and disclosure expertise, ENGIE Insight guides clients through each step of their journey to a low-carbon future.

ENGIE Insight's end-to-end services help multi-site businesses with the following cornerstones of disclosure:

### Assess Current State

Assess your material business issues through a deep understanding of competitive, regulatory, and climate-related pressures facing your organization.

- **ESG Performance Assessment.** Assess your industry position with a robust analysis of unique risks and opportunities, including industry benchmarking, competitor assessments, and regulatory concerns.
- **Materiality Assessment.** Leverage an industry-standard framework to define key issues, engage a representative sample of stakeholders, and map results to reveal your sustainability priorities.

- As **one of only eight** companies globally providing CDP-accredited carbon accounting software,
- ENGIE Insight maintains a team of experts certified in the World Resources Institute's Greenhouse Gas Protocol
- including individuals trained by CDP to score Climate Change responses

## Manage Emissions Data

Streamline Greenhouse Gas data collection and analysis with a centralized platform and the support of carbon accounting experts.

- **Carbon Manager Platform.** One centralized, international GHG emissions database with streamlined data upload, emissions libraries and trend and outlier reporting to simplify Scope 1, 2 and 3 GHG reporting.
- **Greenhouse Gas Accounting.** ENGIE Insight develops a robust inventory of all GHG emissions and provides a standardized framework to ensure streamlined and repeatable accounting year over year.

## Develop a Disclosure Strategy

Once organizations have the foundational information to disclose, ENGIE Insight helps organizations navigate the constantly evolving industry reporting frameworks.

- **Disclosure Strategy Review.** Leverage current state, emissions footprint, and existing disclosure strategy to prioritize high-impact changes to sustainability programs and reporting.
- **Sustainability Reporting Response Guidance.** Leverage expert guidance to receive your best possible score on widely adopted industry frameworks, including:
  - CDP Climate, Water, and Forests
  - Global Reporting Initiative (GRI) Core and Comprehensive
  - GRESB Real Estate
- **Scenario Analysis.** To lead in your industry, assess and disclose long-term financial risks facing your organization according to CDP's newly incorporated guidelines from the Task Force of Climate-Related Financial Disclosures (TCFD).

## Set Evidence-based Targets

Whether you aim to establish a goal or figure out how to achieve a pre-determined one, we will help you analyze your global emissions footprint to help you validate goals, develop a plan and track ongoing performance.

- **Carbon Target Evaluation.** Leverage a robust assessment of calculated and modeled emissions to confirm mid-term and long-term carbon reduction targets across your entire portfolio. Targets may be relative, absolute or science-based.
- **Roadmap Development and Management.** Establish a multi-year roadmap to achieve newly-established targets and stay on track with an annual review of performance to goal.

As a result, ENGIE Insight's clients experience:

- The highest possible carbon performance score or ranking
- Streamlined data management and operations
- Minimized burden on internal resources
- Realistic, action oriented emissions reduction target development

Contact an ENGIE Insight representative today to develop a cohesive strategy for your sustainability disclosure and carbon management.
