

# Energy Rebate Management Services (ERMS)

Billions in energy efficiency incentives, commonly referred to as energy rebates, are currently available nationwide. Encouraging companies to begin or to continue implementing energy efficiency measures directly responds to grid congestion, electric supply reliability and environmental issues. ENGIE Insight's Energy Rebate Management Services (ERMS) helps our clients gain access to these financial incentives, driving both immediate and long-term savings.

ERMS is designed for multi-site companies and organizations looking to offset the significant investment costs associated with energy-efficient capital improvement projects. Because the process of applying for and receiving funds can be cumbersome and time-intensive, ENGIE Insight provides the following phased approach to systematically identify available financial incentives across your portfolio:

- Identify projects and available rebate opportunities
- Prioritize applicable rebates based on financial return, high-value incentive markets and identified efficiency opportunities
- Work with facility managers or selected vendors to collect existing equipment information and validate retrofit equipment eligibility
- Deliver quarterly reports detailing opportunities and status updates
- Serve as the utility's point-of-contact throughout the application process
- Receive incentive payment, validate and remit client's portion
- Manage and track the entire application process (including collecting supporting documentation and arranging pre- and post-project inspections)

Our consultative approach helps integrate a rebate solution into our client's overall strategy as we support them from the start of the investment planning process to support their capital improvement strategy.

## Rebates and Incentives

Identify

File

Obtain

ENGIE Insight will identify, file and obtain utility rebate and incentive monies in support of, and consistent with, clients' financial goals. This turnkey program can be customized for each client's specific needs.

On average, our clients qualify for rebates comprising 30 percent of the cost of eligible energy efficiency investments.

Upgrades to facility lighting systems typically deliver 25-35 percent reductions in energy usage, with a simple payback of two-to-three years.
